ADVANCED COMPUTER AND INFORMATION SCIENCE
SURAT

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT

PROJECT REPORT ON
FIT-BUDDY GYM
AS A PARTIAL REQUIREMENT FOR THE DEGREE
OF
BACHELOR OF COMPUTER APPLICATION
(B.C.A)2024-2025

GUIDED BY :

Ms. SUMATHI SHENOY

SUBMITTED BY :

AYUSH PARMAR

ACKNOWLEDGEMENT

It gives me great pleasure in submitting this project entitled “**FIT-BUDDY GYM**” as a part of the curriculum of BCA (Semester V).

We avail this opportunity to express my heartfelt gratitude to a number of people who extend their full support and co-operation in developing this project and also imparting Knowledge to me in various other domain of software technology.

We would like to take opportunity to thank my collage, **VIVEKANAND COLLEGE FOR ADVANCED COMPUTER AND INFORMATION SCIENCE SURAT**. for giving me this tremendous opportunity to work in the real-time project.

We heartily thank my project guide, **Ms. SUMATHI SHENOY** who was always there to guide me through the development of the project. He is one of the major sources behind the success of the project. I immensely appreciate the tips he has constantly given us during the project. It was an enormous pleasure to work with him.

We am thankful to the faculty of the institute for their constant guidance not only during training period but also throughout college career.

Finally we would like to thank **My guide** for their support throughout the project. I owe a special debt to our family & friends for their support blessing and encouragement for me.

-AYUSH PARMAR

Reg. No. E/4682/SURAT Dt.15-11-2000

Ph. 7043365488

(Abhinav Education Trust-Surat)
**VIVEKANAND COLLEGE FOR
ADVANCE COMPUTER & INFORMATION SCIENCE**

(Affiliated to the Veer Narmad South Gujarat University)
Near Saroli Bridge, Jahangirpura, Surat-Olpad Road, SURAT-5

CERTIFICATE

This is to certify that Parmar Ayush A. Exam No 2665 has successfully completed his / her Mini Project work entitled Fit-buddy vym as partial fulfillment of the TYBCA (Sem-5) during academic year 2024-2025.

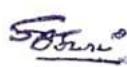

Name of Guide: Prof. Sumathi shenoy.

INTRODUCTION

1. PROJECT PROFILE

Project Title	FIT-BUDDY GYM
Project Definition	<p>‘FIT-BUDDY GYM’ Website basically contains:</p> <p>1. Admin Side</p> <ul style="list-style-type: none"> <input type="checkbox"/> Manage login <input type="checkbox"/> Manage Customer <input type="checkbox"/> Manage Memberships <input type="checkbox"/> Manage Membership Buyers <input type="checkbox"/> Manage Products <input type="checkbox"/> Manage Products Buyers <input type="checkbox"/> Mange Payment Of Memberships <input type="checkbox"/> Mange Payment Of Products <p>2. Client Side</p> <ul style="list-style-type: none"> <input type="checkbox"/> View Pages <input type="checkbox"/> View Memberships <input type="checkbox"/> View Products <input type="checkbox"/> Registration <input type="checkbox"/> Login/Logout <input type="checkbox"/> Membership Buy page <input type="checkbox"/> Product Buy page <input type="checkbox"/> Payment Page Of Products <input type="checkbox"/> Payment Page Of Memberships
Duration	3 Months
Project External Guide	Ms. Sumathi Shenoy
Front End	HTML , CSS , BOOTSTRAP & JS
Back End	PHP(MYSQL server)

Operating System

Windows 11 [64 bits]

2. PROJECT INTRODUCTION

A gym website's primary objects include several key sections and features. The main sections comprise Home/Welcome, About Us, Services, Facilities, Membership, Classes/Schedule, Trainers/Staff, Contact/Location, and Testimonials. These sections provide essential information about the gym, its services, and facilities.

Key features of a gym website include membership registration and payment gateway, class scheduling and booking system, personal training session booking, member login and profile management, news/blog section, social media integration, photo and video gallery, online support/chat system, and search engine optimization (SEO).

Functionally, a gym website should allow users to register and log in, manage memberships (renewal, cancellation), process payments, schedule classes and receive reminders, receive email notifications, book online appointments, integrate with fitness tracking software, and provide mobile responsiveness.

In terms of content, a gym website should include gym policies and rules, membership terms and conditions, service descriptions and pricing, trainer bios and certifications, class descriptions and schedules, testimonials and success stories, fitness tips and articles, promotions and discounts, and an event calendar.

Lastly, design elements play a crucial role in creating an engaging and user-friendly website. Essential design elements include modern and responsive design, prominent call-to-actions (CTAs), high-quality images and videos, clear typography and navigation, colour scheme and branding.

consistency, mobile-friendly layout, accessibility features, social media links, and a feedback and review system.

By incorporating these primary objects, features, functionalities, content, and design elements, a gym website can effectively showcase its services, engage members, and attract new customers.

3. HARDWARE REQUIREMENT

Client Side

- Internet enable device with any browser that support bootstrap & JavaScript.

Server Side

- Desktop or Laptop Computers
- Input Devices
- Networking Equipment
- Backup Storage

Developer Side

- RAM : 8 GB or above
- Processor : Quad Core(Or Higer) CPU @ 2.00GHz 2.60 GHz

4. SOFTWARE REQUIREMENT

Client Side

- Client On Internet: Chrome any Browser

Server Side

- Payment Gateway
- Send Email

Developer Side

- Development IDE : Visual Studio Code
- Operating System : Windows 11(64-bits)
- Front-End Language : HTML, CSS, BOOTSTRAP, JS
- Back-End Language : PHP
- Server : Apache server, XAMPP
- Database : MYSQL
- Network Interface: 10Mbps Internet

TOOLS AND TECHNOLOGY

CORE TECHNOLOGY

PHP5 (Back End)

Xampp Server

CORE TECHNOLOGY

➤ About PHP/What is PHP

- PHP Stands For Hypertext Pre-Processor.
- PHP was introduced by Rasmus Lerdorf in the first version and participate in the latest version.
- PHP is general-purpose scripting language and interpreter that is freely available and widely used for web development.
- PHP is a server side scripting language.

➤ Purpose of use PHP

- PHP is primarily used for server-side web development.
- It enables the creation of dynamic web pages by embedding PHP code within HTML.
- PHP can perform various tasks, including handling form data, generating dynamic page content, managing databases and interacting with servers.

❖ Syntax

```
<?php
```

PHP code goes here

```
?>
```

❖ Example

```
<html>
<head>
    <title>PHP Hello World</title>
</head>
<body>
    <?php echo "Hello World! This Is The PHP code";?>
</body>
</html>
```

❖ Output

Hello World! This Is The PHP code

➤ Advantages of PHP

Since PHP is designed for the web in the first place, it brings many advantages to web development:

- Simple – PHP is quite easy to learn and get started.
- Fast – PHP websites typically run very fast.
- Stable – PHP is stable since it has been in existence for a long time.
- Open-source and free – PHP is open source and free. It means that you don't have to pay a license fee to use PHP to develop software products.
- Community support – PHP has an active online community that helps you whenever you face an issue.

➤ About HTML/What is HTML

- HTML stands for Hyper Text Markup Language.
- is the standard markup language used to create web pages.
- It's a combination of Hypertext, which defines the link between web pages, and Markup language, which is used to define the text document within tags to structure web pages.
- HTML is human-readable and uses tags to define what manipulation has to be done on the text.

➤ Purpose of use HTML

- This language is used to annotate text so that machines can understand and manipulate it accordingly.
- HTML is the human-readable and uses tags to define what manipulation has to be done on the text.
- All Browser support in HTML Language.

❖ Example

```
<html>
    //To Display The Content
</html>
```

❖ Syntax

```
<html>
```

```
<head>
    <title>Hello World</title>
</head>

<body>
    <p>Hello World.</p>
</body>
</html>
```

❖ Output

Hello World.

➤ *Advantages of HTML*

- HTML helps to build structure of a website and is a widely used Markup language.
- It is easy to learn.
- Every browser supports HTML Language.
- HTML is light weighted and fast to load.
- Storage of big Fields are allowed because of the application cache feature.
- Do not get to purchase any extra software because it's by default in every window.
- Loose syntax (although, being too flexible won't suit standards).
- HTML is simple to edit as being a plain text.

➤ About CSS/What is CSS

- CSS stands for Cascading Style Sheet.
- CSS is the inside the head and style tag.
- CSS is a stylesheet language used to describe the presentation of a document written in HTML or XML (including XML dialects such as SVG, MATHML or XHTML).
- CSS is easy to learn and understand.
- It gives great control over the presentation pf an HTML documents.
- CSS is combine with HTML and XHTML.
- .Purpose of use CSS

- CSS allow you to specify the style in which your XML elements are displayed.
- CSS were originally designed for use with HTML, but work for XML as well.
- Supports the separation of structure from presentation.
- If the HTML is the content and meaning, CSS helps to convert that meaning.
- Three Types Of CSS
 - 1. Inline CSS
 - 2. Internal CSS
 - 3. External CSS

❖ Syntax

Selector {Property: value; Property: value;}

❖ Example

```
<html>
  <head>
    <title>Hello World</title>

  <style>
```

```
p{  
    color: red    text-  
    align: center;  
}  
</style>  
</head>  
<body>  
    <p>Hello World.</p>  
</body>  
</html>
```

❖ Output

Hello World.

➤ *Advantages of CSS*

1. Consistency and Global Styling

CSS ensures a consistent visual identity throughout a website or multiple web pages. By employing a single external CSS Field, it becomes possible to maintain a cohesive style, minimizing duplication and simplifying global styling updates.

2. Easier Maintenance and Efficient Updates

The separation of content and style in CSS simplifies maintaining web pages and implementing updates. By modifying a few lines of code in the central CSS Field, you can quickly adjust fonts, colors, and layouts without the need to edit each HTML element. This results in a more efficient and hassle-free maintenance process.

3. Time-Saving and Faster Loading Times

Utilizing external CSS Fields allows web browsers to cache the styling information, resulting in more efficient and faster page load times. This

optimization greatly enhances the overall user experience, especially for returning visitors. For instance, once a browser caches the CSS Field, it doesn't need to reload the styles on subsequent visits, reducing load times and improving site performance.

4. SEO-Friendly

Employing clean and structured CSS code can enhance your website's search engine optimization. By making your code more readable for search engine crawlers, CSS can potentially boost your site's search rankings, leading to increased visibility and traffic.

MySQL is an open-source relational database management system (RDBMS) that uses Structured Query Language (SQL) for database access and manipulation. It is known for its reliability, robustness, and ease of use. MySQL is widely used for web applications and is a central component of the LAMP stack (Linux, Apache, MySQL, PHP/Perl/Python).

❖ Syntax

```
CREATE DATABASE mydatabase;
```

❖ Example

```
CREATE TABLE users (  id INT AUTO_INCREMENT  
    PRIMARY KEY,  username VARCHAR(50) NOT NULL,
```

```
email VARCHAR(100) NOT NULL,    created_at  
TIMESTAMP DEFAULT CURRENT_TIMESTAMP  
);
```

➤ Advantages of MySQL

1. **Open Source:** MySQL is free to use and distribute, making it a cost-effective solution for businesses.
2. **High Performance:** MySQL is designed for speed and efficiency, handling large databases with millions of rows.
3. **Cross-Platform:** It runs on various operating systems, including Linux, Windows, and macOS.
4. **Scalability:** MySQL supports large databases and can scale as your application grows.
5. **Security:** It offers robust security features, including encrypted connections, user authentication, and access control.
6. **Community Support:** A large community of developers and users provides extensive documentation, tutorials, and forums for support.
7. **Replication:** MySQL supports replication, allowing data from one database server to be replicated to another, enhancing redundancy and reliability.

➤ Disadvantages of MySQL

1. **Limited Advanced Features:** Compared to some other RDBMS like PostgreSQL, MySQL may lack some advanced features such as full ACID compliance in all storage engines.
2. **Performance Issues with Very Large Databases:** While MySQL handles large databases well, extremely large databases (terabytes of data) may require more specialized solutions.

3. **Complexity in Large-Scale Applications:** Managing MySQL databases in large-scale applications can become complex and may require expert knowledge.
4. **Storage Engine Limitations:** MySQL uses different storage engines (like InnoDB and MyISAM), each with its own strengths and weaknesses, which can sometimes lead to compatibility issues or the need for specific optimizations.
5. **Lack of Built-In Support for Advanced Analytics:** MySQL is not designed for advanced analytics or data warehousing out of the box, which might require integration with other tools or systems.

EXTRA TECHNOLOGY

JavaScript is a versatile, high-level programming language that is primarily used to create interactive effects within web browsers. It is one of the core technologies of the World Wide Web, alongside HTML and CSS. JavaScript enables the development of dynamic and interactive web applications by allowing developers to manipulate the Document Object Model (DOM), handle events, and make asynchronous requests to servers.

❖ Syntax

```
document.getElementById("myElement").innerHTML = "New content";
```

❖ Example

```
document.getElementById("myButton").addEventListener("click",
function() { alert("Button clicked!");
});
```

➤ Advantages of JavaScript

1. **Interactivity:** Enables dynamic and interactive web pages.
2. **Versatility:** Can be used for both client-side and server-side development (with Node.js).
3. **Rich Ecosystem:** Extensive libraries and frameworks (e.g., React, Angular, Vue.js).
4. **Event-Driven:** Excellent for handling user interactions.
5. **Asynchronous Capabilities:** Supports asynchronous operations, enhancing performance.
6. **Cross-Platform:** Runs on any device with a web browser.

➤ Disadvantages of JavaScript

1. **Security Issues:** Vulnerable to cross-site scripting (XSS) attacks.
2. **Browser Differences:** Inconsistent behavior across different browsers.
3. **Performance Issues:** Can be slower than compiled languages for complex computations.
4. **Client-Side Dependency:** Requires client-side execution, which can be disabled by users.
5. **Dynamic Typing:** Can lead to runtime errors due to lack of type checking.

Bootstrap is a popular open-source front-end framework that helps developers build responsive, mobile-first websites quickly and efficiently. It includes a collection of HTML, CSS, and JavaScript components for common interface elements such as buttons, forms, navigation, and modals. Created by Twitter, Bootstrap provides a consistent design and functionality across different browsers and devices.

❖ Syntax

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Bootstrap Example</title>
  <!-- Bootstrap CSS -->
  <link
    href="https://maxcdn.bootstrapcdn.com/bootstrap/4.5.2/css/bootstrap.
    min.css" rel="stylesheet">
</head>
<body>
  <!-- Bootstrap components go here -->

  <!-- jQuery and Bootstrap JS -->
  <script
    src="https://ajax.googleapis.com/ajax/libs/jquery/3.5.1/jquery.min.js">
  </script >
  <script>
```

```
src="https://maxcdn.bootstrapcdn.com/bootstrap/4.5.2/js/bootstrap.mi  
n.js"> </script>  
</body>  
</html>
```

❖ Example

```
<nav class="navbar navbar-expand-lg navbar-light bg-light">  
  <a class="navbar-brand" href="#">Navbar</a>  
  <button class="navbar-toggler" type="button" data-toggle="collapse"  
  data-target="#navbarNav" aria-controls="navbarNav" aria-  
  expanded="false" aria-label="Toggle navigation">  
    <span class="navbar-toggler-icon"></span>  
  </button>  
  <div class="collapse navbar-collapse" id="navbarNav">  
    <ul class="navbar-nav">  
      <li class="nav-item active">  
        <a class="nav-link" href="#">Home <span  
        class="sr-only">(current)</span></a>  
      </li>  
      <li class="nav-item">  
        <a class="nav-link" href="#">Features</a>  
      </li>  
      <li class="nav-item">  
        <a class="nav-link" href="#">Pricing</a>  
      </li>  
      <li class="nav-item">  
        <a class="nav-link disabled" href="#" tabindex="-1"  
        aria-disabled="true">Disabled</a>  
      </li>  
    </ul>  
  </div>  
</nav>
```

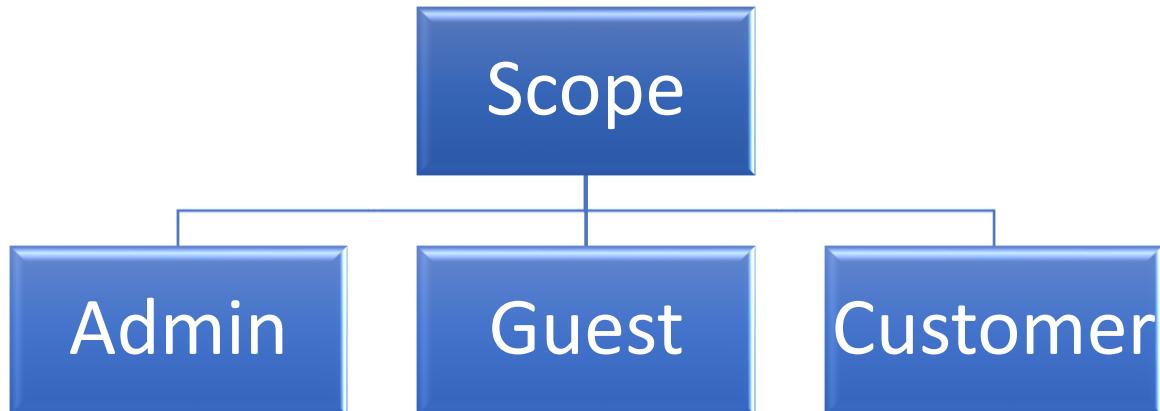

➤ Advantages of Bootstrap

1. Responsive Design: Bootstrap's responsive grid system and components ensure your website looks good on all devices.
2. Consistent Design: Provides a consistent look and feel across different browsers and devices.
3. Ease of Use: Easy to learn and use, with extensive documentation and examples.
4. Customization: Highly customizable with the ability to override default styles.
5. Community Support: Large community with a wealth of resources, plugins, and themes available.
6. Pre-styled Components: Includes a wide range of pre-styled components, saving development time.

➤ Disadvantages of Bootstrap

1. Learning Curve: Although easy to use, there is a learning curve to understanding and effectively using all of Bootstrap's features.
2. Overuse of Classes: Heavy use of classes can lead to bloated HTML and difficulty in maintaining code.
3. Uniform Look: Websites built with Bootstrap can sometimes look similar if default styles are not customized.
4. Performance: Including the entire Bootstrap library can increase the load time of your website, especially if you are only using a few components.
5. Dependency on jQuery: Some components depend on jQuery, adding to the overall page weight.

5. SCOPE

1) Admin

- **Membership and buying Management:** Administer memberships, Trainer, Accessibility of gym, Allocate operations.
- **Product and buying Management:** Products details and buy process.
- **Content Management:** Update website content like news, events, and gym info.
- **Data Analytics:** Members, Products data, and Gym performance reports.
- **User and Permission Management:** Manage roles, permissions, and user accounts (e.g., admin, staff, etc.).
- **Security and Compliance:** Ensure safety regulations, and data security are followed.

2) Guest

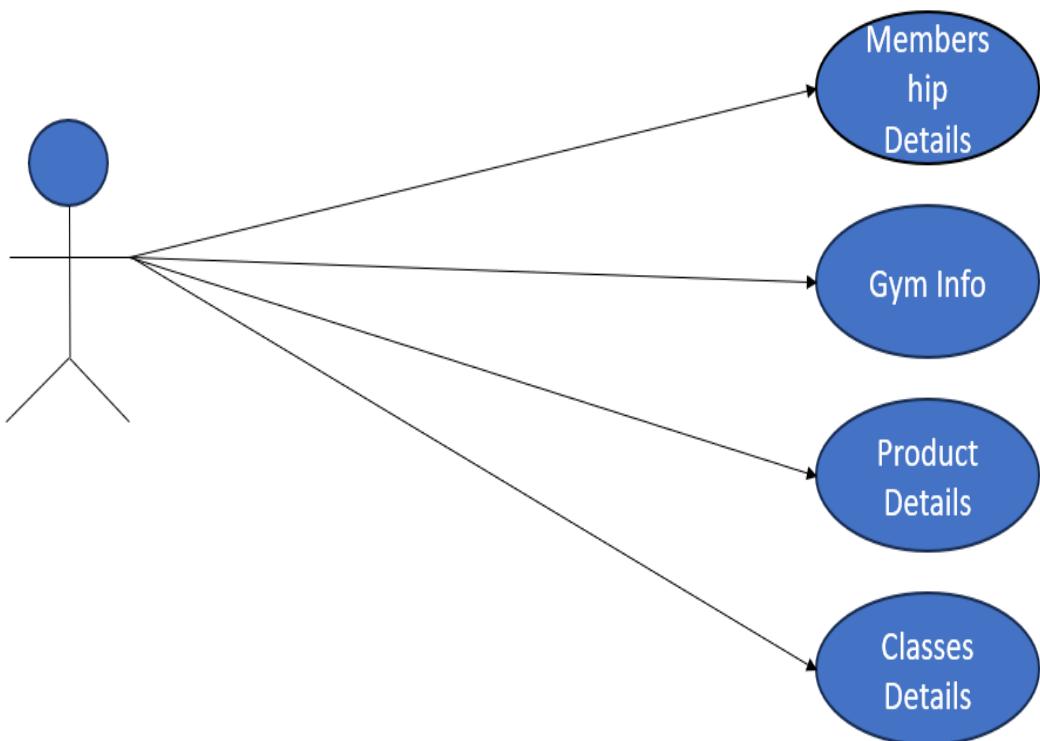

- **Browse Attractions:** View gym attractions, memberships, and products and classes without an account.
- **Gym Information:** Access basic info like trainer, timing, products, and FAQs.
- **Membership Pricing:** See available memberships options but need to log in or register for buying.
- **Visitor Guidelines:** Access safety regulations, gym rules, and visitor services.

3) Customer

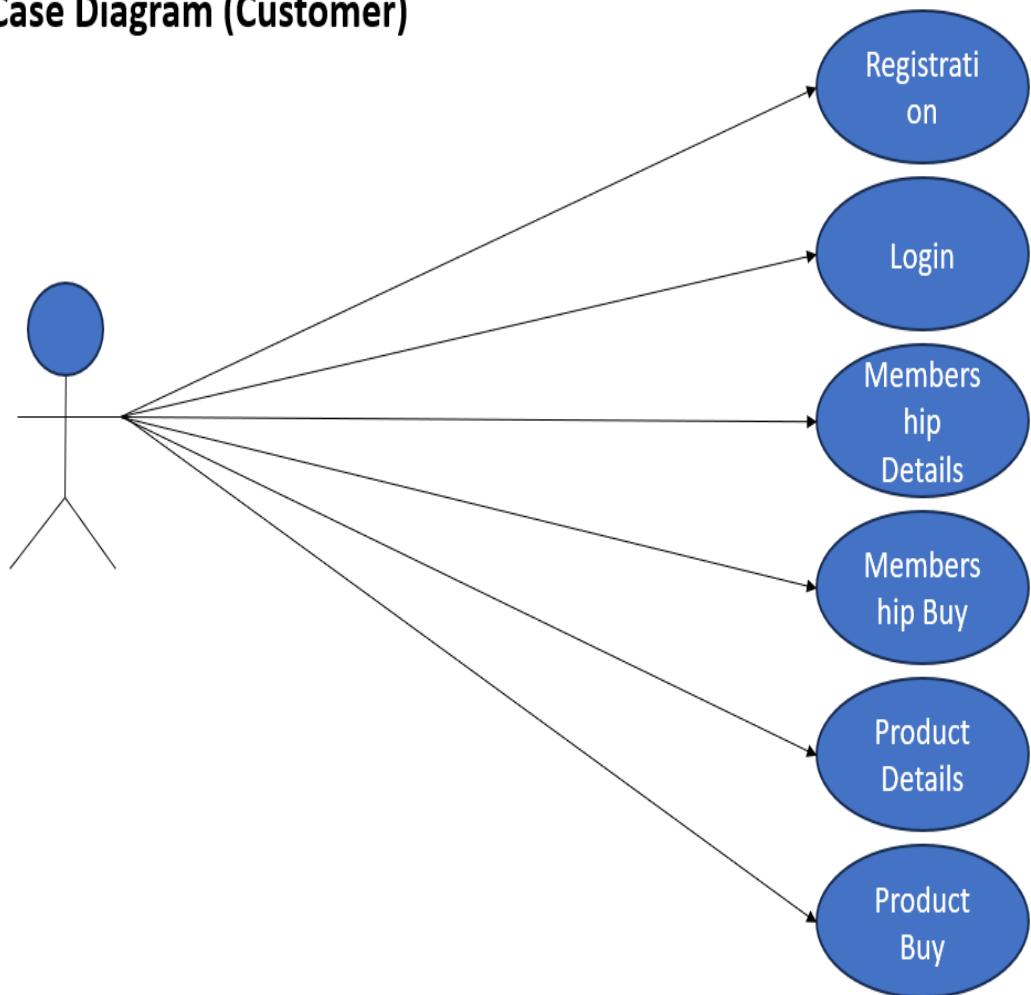

- **Membership Buying:** Browse membership options and buy membership online.
- **Product Buying:** Browse product options and buy products online.
- **User ProField Management:** Manage personal details, ticket history, and saved preferences.
- **Memberships:** Access benefits, points, and exclusive offers.
- **Contact and Support:** Access customer service for assistance and inquiries.

7. Database Design

Table Structure:

Customer: This table is store the data of Customer.

-Data is inserted in register page .

Name of the Field	Name in Field	Variable in php	Field name in database	Variable store in DB	Type in Field	Data type in Database
Id	txtid	\$id	id	\$id	Number	Int(3)
Name	txtname	\$name	name	\$name	Text	Varchar(20)
Gender	gen	\$gender	gender	\$gender	Radio Button	Text
Age	txtage	\$age	age	\$age	Number	Int(3)
Mobile Number	txtmobile	\$mobile	mobile	\$mobile	Number	Varchar(10)
E-mail	txtemail	\$email	email	\$email	Email	Varchar(20)
Password	txtpassword	\$password \$soltedpassword	password	\$soltedpassword	Text	Varchar(11)

Admin: This table is stored the data of Admin.

-Data is inserted manually in Database .

Field name in database	Data type in Database
id	Int(3)
name	Varchar(20)
gender	Text
age	Int(3)
mobile	Varchar(10)
email	Varchar(20)
password	Varchar(11)

Membership: This table is stored the data of which membership plan available in our website.

-This data is inserted from admin panel and insert or update by admin.

Name of the Field	Name in Field	Variable in php	Field name in database	Variable store in DB	Type in Field	Data type in Database
Package Id	txtpid	\$pid	pid	\$pid	number	Int(3)
Amount	txtamount	\$amount	amount	\$amount	number	Int(5)
Days	txtdays	\$days	days	\$days	number	Int(4)
Personal Trainer	txttrainer	\$trainer	trainer	\$trainer	Radio button	tinyint(1)
Access	txtaccess	\$access	access	\$access	Radio button	tinyint(1)
Personal Locker	txtlocker	\$locker	locker	\$locker	Radio button	tinyint(1)
Cardio	txtcardio	\$cardio	cardio	\$cardio	Radio button	tinyint(1)
Steam	txtsteam	\$steam	steam	\$steam	Radio button	tinyint(1)

Product: This table is stored the data of which product available in our website.

-This table data is inserted from admin panel and insert or update by admin.

Name of the Field	Name in Field	Variable in php	Field name in database	Variable store in DB	Type in Field	Data type in Database
Product Id	txtpid	\$pid	pid	\$pid	number	Int(3)
Name	txtname	\$name	pname	\$name	text	Varchar(20)
Price	txtprice	\$price	price	\$price	number	Int(5)
Image Name	tx mg	\$img	img	\$img	text	Varchar(20)

Buy: This table is stored the data of which customer has buy the membership plan.

-If the membership buy and done the payment by customer then inserting the data .

-Admin cannot update the data in this table.

Field name in database	Datatype in database
payid(payment id)	int(3)
id(customer id)	int(3)
name(customer name)	varchar(20)
mobile	int(10)
pid(membership id)	int(3)

Product_buy: This table is stored the data of which customer has buy the product.

-If the product buy and done the payment by customer then inserting the data.

-Admin cannot update the data in this table.

Field name in database	Datatype in database
payid(payment id)	int(3)
id(customer id)	int(3)
name(customer name)	varchar(20)
pid(product id)	int(3)
qty	int(3)
price	int(5)
total	int(10)

SESSION:

- Session is used to store the value of some periods of me . -
- In this website we use the session.

TOTAL SESSIONS:

- \$_SESSION['id'] ~~ login customer or admin id.
- \$_SESSION ['user'] ~~ login customer name.
- \$_SESSION['user1']~~ login admin name.
- \$_SESSION['pid']~~ buy membership id.
- \$_SESSION['pid1']~~ buy product id.
- \$_SESSION['qty']~~ buy product qty.
- \$_SESSION['price']~~ buy product price. - \$_SESSION['total']~~ buy product total amount pay.

Pages:

- Pages are divided in 5 part.
- Join us
- Client panel
- Admin panel
- Membership manage
- Product manage

Join us:

- Login.php

- Delete.php(delete the membership)

Product manage:

- Padd.php(insert the product)
- Pedit.php(update the product)
- Pdelete.php(delete the product)

8. TEST CASES

Software Testing:

Software Testing Is A Critical Element Of Software Quality Assurance And

Represents The Ultimate Review Of Specification Design And Coding.

Testing Is An Exposure Of A System To Trial Input To See Whether It Produces Correct Output. Testing Cannot Be Determined

Whether Software Meets User's Needs, Only Whether It Appears to Confirm to Requirements. Testing Can Show That A System Is Free Of Errors, Only That It Contains Error. Testing Finds Errors, It Does Not Correct Errors. Software Success Is A Quality Product, On Time And Within Cost. Though Testing Can Reveal Critical (Costly) Mistakes.

Therefore, Testing should be performed to:

- Validate Performance.
- Detects Errors.
- Identify Inconsistencies.

□ Test Objective:

There Is Strong Evidence That Effective Requirement Management Leads

To Overall Project Cost Savings. The Three Primary Reasons For This Are:

Requirement Errors Typically Cost Well Over 10 Times More To Repair Than Other Errors.

Requirement Errors Typically Comprise Over 40% Of All Errors In A Software Project.

Small Reduction In The Number Of Requirement Errors Pays Big Dividends In Avoided Rework Costs And Schedule Delays.

The Testing Procedure Should Care For All Of These, As Well As, In Order To Attain A Flawless, Error-Free And Efficient Functioning System; Too, Software Testing Is An Important Phase Of Any Software Development Life Cycle. Various Reports And Data Used For The Same Are The Core Of The System. The Testing, Therefore, Becomes Important In Order To Maintain The Cost As Well As Improve Performance And Consistency. The Testing Procedure For The System Has Been Divided In To Various Parts Ranging From Single Unit Testing To Entire System Testing.

□ Test Planning:

- Test Planning Evolves The Following Steps:
- Estimate The Size And Cost Of The Testing Efforts.
- May Allocate Test Resources.
- Schedule Test Activities in Accord with Other Development Work.
- Generate Test Cases.

□ Generating Testing Cases:

- A Test Case Is A Unit Of Testing Activity. Test Cases Have Three Parts:
 - Goal- The Aspect of the System Being Tested.

- Input And System State- Data Provided To The System Under Stated Conditions.
- Expected Behaviour- The Output Or Action The System Should Take According To These Requirements.

□ Test Case Selection:

The Presented System “Coderszone.Com” Is Tested Using

White Box Testing Which Is Based On The Internal Structure Of The System, May Also Called As Testing To Code, Path-Oriented Testing, Or Logical Driven Testing. A Common Goal Of White-Box Testing Is To Have A Test Case To Exercise Every Path Through A Program. This May Become Exhaustive.

Type of Testing We Performed

□ White Box Testing Case Selection:

Because Exhaustive White-Box Testing Is Infeasible, Test Or Code Coverage Metrics Are Used To Select Test Cases, Which Measure The Fraction Of Code Exercised By Test Cases. Test Cases Are Selected To Achieve Target Test Coverage Levels. □ Test Coverage Metrics

- **Statement Coverage:** The Fraction Of Statements Executed At Least Once Is Running A Collection Of Test Cases.

- **Branch Coverage:** The Fraction Of Total Branch Directions

That Have Been Taken At Least Once In Running A Collection Of Test Cases,

- **Path Coverage :** The Fraction Of Paths Taken At Least Once

In Running A Collection Of Test Cases, Where A “Path” Is Defined In Some Way To Limit The Totals Of Feasible Collection.

□ Unit Testing:

□ The Presented System Is Tested First Using Unit Testing. Unit Testing Is Test Of Code Written By A Single Programmer.

□ Integration Testing:

Top-Down: Combine, Test And Debug Top-Levelled Routines That Become The Integration Test That Harms For Lower-Level Units.

Bottom-Up: Combine, Test Low-Level Routines Into Progressively Larger Modules And Subsystems.

Sandwich: Mainly top-down with bottom-up integration and testing applied to certain widely used components.

□ Integration Testing:

The system is tested using sandwich testing so as it has integrated advantages of both the top-down integration as well as bottom-up

integration testing.

□ Advantages of Using Top Down Integration:

- The top levels of the system are tested the most.
- Distributes integration and testing throughout the coding phase.
- Tends to make bug location easier.
- Minimizes test harness creation.

□ Advantages of Using Bottom-Up Integration:

Works well early in the integration process; thorough testing is possible and bugs are easy to be found.

□ Test Completion:

- White-box test coverage targets are met.
- Rate of error discovery reduced the target value.
- Measured reliability of the system achieves its target value.

ADMIN MYSQL SERVER

The screenshot shows the phpMyAdmin interface for a MySQL server at 127.0.0.1, connected to the database 'fit-buddy'. The left sidebar lists various databases, with 'fit-buddy' selected. The main area displays the structure of the 'fit-buddy' database, showing six tables: admin, buy, customer, membership, product, and product_buy. A table summary at the bottom indicates 36 rows and 192.0 Kib overhead.

Table	Action	Rows	Type	Collation	Size	Overhead
admin	Browse Structure Search Insert Empty Drop	3	InnoDB	utf8mb4_general_ci	32.0 Kib	-
buy	Browse Structure Search Insert Empty Drop	8	InnoDB	utf8mb4_general_ci	48.0 Kib	-
customer	Browse Structure Search Insert Empty Drop	10	InnoDB	utf8mb4_general_ci	32.0 Kib	-

HOME PAGE

The screenshot shows the homepage of the Fit-Buddy website. At the top, there's a navigation bar with links for Home, About Us, Membership, Class, Products, and Contact Us. There are also 'JOIN NOW' and 'REGISTRATION' buttons. Below the navigation, a banner features the text 'THE BEST FITNESS CLUB' and a large headline 'Work Hard To Get Better Life'. A subtext below the headline reads: 'Transform Your Fitness Journey with Our Comprehensive Gym Website - Your Ultimate Fitness Companion'. On the right side of the banner, there's a muscular man lifting dumbbells. Two small callout boxes are overlaid on the image: one showing 'Calories Burned 100 bpm' and another showing 'Heart Rate 100 bpm'. At the bottom left of the banner is a 'GET STARTED' button.

ABOUT US PAGE

The screenshot shows the 'About Us' page of the Fit-Buddy website. On the left, there's a large image of a woman working out with dumbbells, set against a background of concentric circles. On the right, there's a section titled 'ABOUT US' with the heading 'Welcome To Our Fitness Gym'. Below the heading, there's a paragraph about the gym's services and a testimonial. At the bottom, there's a profile picture of a coach named Tom Weskii and a 'EXPLORE MORE' button.

ABOUT US

Welcome To Our Fitness Gym

GymiFy is a premium fitness center that offers state-of-the-art equipment, experienced trainers, and customized workout plans to help you achieve your fitness goals.

Our welcoming environment and friendly staff make every visit an enjoyable experience. Join us to transform your body, boost your energy, and improve your overall health and wellbeing.
